

WIN YU YU MYAT

winyu2myat193@gmail.com | +66 657088438 | [LinkedIn](#) | [GitHub](#) | [Tableau Public](#) | [Portfolio](#)

SUMMARY

Proficient in Python, SQL, Java, HTML/CSS, and advanced Excel for data analysis and automation. Experienced in data preprocessing, EDA, feature engineering, and predictive model development using Pandas, NumPy, and Scikit-learn. Skilled in handling missing data through imputation techniques such as KNN, mean, and median, and evaluating model performance using accuracy, precision, recall, and F1-score. Skilled in creating interactive dashboards with Power BI and Tableau, and experienced in statistical analysis and data preparation using SAS Enterprise Guide. Strong foundation in data mining, machine learning, and business analytics, with proven ability to translate complex data into actionable insights.

WORK EXPERIENCES

Junior Data Analyst Intern (iCONEXT CO.,LTD)

Jun 2025 - Nov 2025

- Developed predictive models for reject inference by performing end-to-end data preprocessing, feature engineering, and model training using Python, machine learning algorithms, and DAVinCI Labs, contributing to improved credit risk evaluation.
- Designed and optimized interactive Tableau dashboards, enabling stakeholders to monitor financial KPIs, uncover trends, and make data-driven decisions more effectively.
- Conducted data validation, data analytics and accuracy checks in SAS Enterprise Guide, ensuring integrity across large financial datasets and supporting reliable business insights.

EDUCATION

Bachelor of Science in Information and Communication Technology Rangsit University International College

Jan 2023 - Dec 2025

- GPA: 3.82/4.00
- Concentrations: Data Analytics, Data Science, Data Warehouse, Data Mining, Machine Learning & AI

PROJECTS

Reject Inference Model Development

Jun 2025 - July 2025

- Developed a reject inference framework to improve credit risk prediction for rejected applicants using historical loan data.
- Performed Good-in-Bad analysis to estimate potential risk profiles of rejected cases and integrated them into the training dataset for model enhancement.
- Utilized Gradient Boosting Machine (GBM) in DAVinCI Labs to build and evaluate predictive models.
- Analyzed key financial features such as credit score, debt-to-income ratio, outstanding debt, and delay from due date, improving model robustness and fairness in credit approval decisions.

Credit Card Fraud Detection ([Github](#))

July 2025

- Built a machine learning model to detect fraudulent credit card transactions using Python.
- Conducted data preprocessing, exploratory data analysis (EDA), and feature selection to understand class imbalance and transaction patterns.
- Applied undersampling techniques to address data imbalance and trained a Logistic Regression classifier using Scikit-learn.
- Evaluated model performance through accuracy, precision, recall, and F1-score, optimizing thresholds for improved fraud detection.
- Utilized Pandas, NumPy, and Scikit-learn for data manipulation, model development, and evaluation.

HR Dashboard — Workforce Demographics & Income Analysis ([Tableau](#))

June 2025

- Developed a data-driven HR analytics dashboard in Tableau to visualize workforce trends and performance insights.
- Conducted data cleaning and transformation to prepare HR datasets for analysis.
- Created calculated fields and parameters to track hiring, termination, and active employee metrics across time.
- Designed interactive visualizations for demographic breakdowns by gender, age, and education, and analyzed salary patterns across departments and education levels.
- Implemented filters and drill-down functionality for detailed employee record exploration, supporting strategic workforce planning and pay equity analysis.

Real Estate Price Prediction Website ([Github](#))

Jan 2025

- Developed a machine learning-based web app to predict real estate prices using Python, Flask, and Scikit-Learn.
- Built a regression model with the Bangalore home prices dataset, applying feature engineering, outlier detection, dimensionality reduction, and hyperparameter tuning using GridSearchCV.
- Integrated the trained model into a Flask API and designed a user-friendly HTML/CSS/JavaScript interface for real-time predictions.

Employee Attrition Analysis Using Data Mining Approach ([Github](#))

Nov 2024 – Dec 2024

- Data Manipulation: Cleaned and pre-processed data from the IBM HR Analytics dataset, alongside additional company-sourced data, focusing on attributes like job satisfaction, work-life balance, and overtime hours.
- Predictive Modeling: Utilized classification algorithms, including Decision Trees, to predict at-risk employees and identify patterns associated with attrition.
- Insights and Outcomes: Gained 82.49% accuracy and provided insights to help HR improve retention strategies.

King County House Sales Dashboard ([Tableau](#))

Nov 2024

- Developed an interactive Tableau dashboard to analyze housing market trends in King County, Washington.
- Performed data cleaning and transformation to visualize key metrics such as average house price, distribution by price range, number of bedrooms and bathrooms, and property condition.
- Integrated geographic mapping and heatmaps to explore spatial price variations and correlations between house condition, view quality, and pricing. Implemented filters for time period, year built, and square footage to enable dynamic, user-driven exploration of real estate patterns.

Revenue Insights in the Hospitality Domain ([Power BI](#))

Nov 2024

- Processed and cleaned raw revenue data using Power Query, structuring it by service type, region, and occupancy for better analytical insights.
- Utilized DAX functions in Power BI to perform revenue forecasting, trend analysis, and customer segmentation, supporting strategic decision-making.
- Developed a visually compelling Power BI dashboard with dynamic filters and drill-down capabilities, enabling stakeholders to identify revenue patterns and optimize pricing strategies.

ACTIVITIES & LEADERSHIP

Student Management Team Leader — RIC Language Center

Jun 2023 – Apr 2025

- Supervise and mentor team members, manage and resolve student inquiries to improve operational efficiency.

Marketing Volunteer — IT&CM Asia & CTW Asia-Pacific

Sept 2024

- Engaged with attendees, supported marketing efforts, and managed event materials distribution.

Public Relations Officer — ASEAN Youth Advocates Network (Myanmar)

2021 – 2022

- Organized webinars, managed external relations, and coordinated marketing to enhance engagement.

CERTIFICATIONS

- SAP Analytics Cloud Training — ASEAN Data Science Explorers 2023 Enablement Session (ASEAN Foundation)
- [Google Data Analytics Professional Certificate](#) (Coursera), [Learning Data Analytics](#) (LinkedIn Learning)

SKILLS

- **Programming & Database:** Python, SQL, Java, JavaScript, HTML/CSS, MongoDB, Microsoft SQL Server, MySQL, SAS Enterprise Guide
- **Data Analysis & Visualization:** Power BI, Tableau, SAP Analytics Cloud, MS Excel, AI Studio
- **Development Tools:** Visual Studio Code, Eclipse, Jupyter Notebook
- **Languages:** English (B2), Japanese (B1), Burmese (Native)
